

Eisenhower Unveils New Tenny Emergency Department

Tenny Emergency Department Ribbon Cutting. LEFT TO RIGHT: Eisenhower Foundation President Michael Landes, Eisenhower President and Chief Executive Officer G. Aubrey Serfling, Marilyn Tenny, Rancho Mirage Councilman Alan Seman, Maria Loverde, Eisenhower Chief Nursing Officer Louise White, Tenny Emergency Department Director Christine Craig, Tenny Emergency Department Medical Director Euthym Kontaxis, MD.

At a ribbon-cutting ceremony on Thursday, January 22, 2009, Eisenhower Medical Center unveiled its newly expanded Tenny Emergency Department. Named for Eisenhower supporters Marilyn and her late husband Bill Tenny, the 44,000 square-foot, state-of-the-art facility more than doubles the size of Eisenhower's emergency department with a total of 41 new treatment areas.

The new Tenny Emergency Department was designed to create a safe, healing environment for patients and families. All of the 37 new treatment rooms are private, and decorated with warm, soothing colors. The ceilings feature photographic slide shows of natural scenes, such as beaches and mountains, which patients can watch from their beds as they are examined and treated. The new rooms have been praised by both families and medical staff for the privacy and safety they afford patients — private rooms are not only more comfortable, but also more effective for infection control.

The new facility has a number of additional features that will help physicians and nurses enhance patient care. Each room is wired with the latest computer technology and contains its own computer, so that the medical team can enter and review patient data immediately. In addition to the private rooms, there are also four trauma bays, which can accommodate two patients each. The bays are designed like an operating room theater, increasing Eisenhower's ability to treat multiple trauma victims in the event of a major accident or disaster. The expanded emergency department also includes the latest in seismic upgrades, and now exceeds all state and federal requirements for earthquake safety.
